A Youth Hostel gathering people together, by design that connects the past by the future and melt in the landscape at Elk Island National Park, Alberta, Canada. The design idea inspires by Pangaea or Pangra which was a supercontinent that existed during the late Paleozoic and early Mesozoic era. It assembled from earlier continental units approximately 355 million years ago, and it began to break apart about 175 million years ago. In this Youth Hostel, we gather people from all the world in one place with a unique design that immerses visitors in rich environmental experience from the moment they enter the site and throughout their visit. In this design sustainable building materials are used for the construction and the finishing, the exterior walls are vertical wood siding, and all the interior walls are stunning Plywood.

A Youth Hostel for: Elk Island National Park, Alberta, Canada  2020-18
